

Hunter Cato

Corvallis, OR | 541-905-8458 | htncato@gmail.com

PROFESSIONAL SUMMARY

Versatile technologist with a background spanning cybersecurity, software testing, and embedded systems engineering. Proven track record discovering and disclosing security vulnerabilities through bug bounty programs on Bugcrowd, HackerOne, and Intigriti, and developing hands-on offensive security skills across 100+ machines on HackTheBox and related platforms. Experienced working in cross-functional engineering teams to deliver complex robotics systems. Currently building entrepreneurial experience as a founder. Open to roles in robotics, software engineering, software testing/QA, and cybersecurity.

EDUCATION

B.S. in Computer Science

Oregon State University | Corvallis, OR

EXPERIENCE

Founder & Owner

Feb 2026 – Present

Chemical Theater Lacquer | Corvallis, OR

- ▶ Launched and operate an e-commerce nail lacquer brand, managing product development, budgeting, website maintenance, order fulfillment, and market research from inception.

Software Tester

Jul 2022 – Dec 2024

Freelance | Remote

- ▶ Discovered and responsibly disclosed security vulnerabilities across Bugcrowd, HackerOne, and Intigriti bug bounty platforms, contributing to improved security postures for real-world products.
- ▶ Performed functional regression testing on Testlio across diverse client applications, reducing post-release defect rates and ensuring software reliability.
- ▶ Self-directed offensive security study resulting in successful compromise of 100+ intentionally vulnerable systems on HackTheBox, TryHackMe, VulnHub, and PortSwigger Academy — building hands-on skills in web exploitation, privilege escalation, and network attacks.

Software Team Lead

Sep 2018 – Jun 2021

LBCC & OSU Underwater ROV Teams | Corvallis, OR

- ▶ Architected and implemented C++ embedded software for an ROV thruster control system, defining module requirements for subsystems including microcontrollers, computer vision, attitude correction, and autonomous movement using the open-source Robot Operating System (ROS).
- ▶ Managed task prioritization and workload distribution across a multi-person software team, identifying critical paths and ensuring on-time delivery of all major subsystems.
- ▶ Served as primary liaison between software, electrical, and mechanical teams, facilitating cross-functional coordination through weekly progress reporting to team leads.
- ▶ Competed at the 2019 MATE International ROV Competition, placing 18th globally while contributing software development, mechanical subsystem design, and pilot operations.
- ▶ Developed Python/OpenCV software enabling the ROV to autonomously follow paths and detect simulated structural damage in underwater environments, improving mission capabilities.
- ▶ Authored and secured a grant from LBCC to fund team operations and equipment

Library Software Assistant

Sep 2018 – Dec 2018

Linn-Benton Community College | Albany, OR

- ▶ Wrote automated tests for Findit, a Blacklight-based content discovery tool, improving software reliability for library patrons.
- ▶ Used PHP and SQL to migrate faculty web content into SubjectsPlus guides, streamlining information access for students.

Fulfillment Center Associate

Aug 2014 – Mar 2019

Kmart | OR

- Maintained high throughput and accuracy in a fast-paced fulfillment environment.

TECHNICAL SKILLS

Languages:Python, C/C++, SQL, PHP

Security:Burp Suite, Vulnerability Research

Testing:Manual & Regression Testing, Bug Report Writing, Functional QA

Robotics/Embedded:ROS (Robot Operating System), Microcontroller Programming, OpenCV, Computer Vision, Embedded C++

Tools & Platforms:Linux, Autodesk Inventor, CAD
